#### The Basics: Screening tests

Screenings (also called screening tests) are medical tests that doctors use to check for diseases and health conditions before there are any signs or symptoms. Screenings help find problems early, when they may be easier to treat.

Getting recommended screening tests is one of the most important things you can do for your health. Depending on your age, sex, and medical history, you may need to be screened for things like:

- Certain types of cancer
- High blood pressure or high cholesterol
- Diabetes
- Osteoporosis (weak bones)
- Sexually transmitted diseases (STDs)
- Hearing loss or vision loss
- Mental health conditions, like depression
